

# Specific Target

## Application: SALT SPREADERS / SANDERS

**The Challenge - The Crisis of Corrosion:** Without question, many municipalities have a love-hate relationship with the admixtures used to combat snow and ice on our roadways. While advances have been made in the composition and application techniques, the problem still remains: salt (chlorides) + metal = corrosion.

**The Solution - Confronting Corrosion** - don't give it a chance to start. **LINE-X** Protective Coatings, applied over a properly prepared substrate will eliminate corrosion from the equation. PLUS added benefits include abrasion resistance, impact resistance and just plain good looks. Also snow and ice won't stick to **LINE-X** like it does to bare metal.

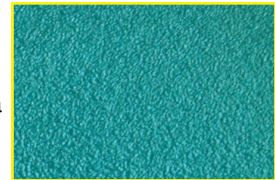

**The Process:** Equipment is dropped off at our **LINE-X** shop. After masking, a thorough cleaning is performed. On new equipment, **LINE-X** is applied right over the paint. For used equipment, the cleaning process includes sand blasting and removal of any pre-existing corrosion, loose paint, etc. Accessories are carefully protected and/or removed as necessary. Cleaned substrates are then primed. **LINE-X XS-100** is then applied using high pressure impingement application equipment. Topcoat can be applied if requested. Following application of **LINE-X XS-100**, the vehicle is unmasked, accessories are replaced and the unit is ready to go. Full cure is complete in 24 hours.

Extremely quick set-up time (2-3 seconds) allows **LINE-X** to be sprayed at any angle without any resulting drips, runs or sags. Color can be matched to any color. Areas of application can include, but are not limited to, box exteriors, box interiors, hoppers, fenders, wheel wells, cab exteriors, etc.

**The Result:** With limited down time, and greatly reduced future maintenance, equipment is protected against the extreme effects of salt action, abrasion, humidity and weather changes - ready to take on whatever Old Man Winter can dish out.

Above: powder coated metal.  
Below: Line-X protected metal.

**Right:** Entire exterior box of sander (yellow & grey) is sprayed with **LINE-X XS-100**.

**Above:** Another excellent application- fertilizer tender truck treated with **LINE-X XS-100** (inside and out).

**Advanced Protective Coatings**
